

Environmental Policy Statement

The Vehicle Group recognises our responsibility towards the environment and are committed to environmental leadership across all areas of our business activities. As we design, manufacture, supply and install electronic accessories for the automotive industry, we acknowledge the impacts our operations can have on the environment. Therefore, we integrate environmental management into our strategic planning and are committed to continuous improvement and pollution prevention as key aspects of our business performance.

Our commitment extends to full compliance with environmental legislation, ensuring we meet applicable environmental laws, regulations, and other requirements. As we prepare for future ISO 14001 accreditation, we continually review and adapt our policies and operations to align with evolving standards.

We are proud to confirm that TVG's Yorkshire based headquarters has been certified by British Gas Trading Ltd. as having 100% of its electricity supply being backed by a mix of Renewable Energy Guarantees of Origin and nuclear declarations through their Zero Carbon Certification from the 7th March 2025. We commit to retain this standard as a minimum, indefinitely.

In addition to ensuring an environmentally responsible energy supply, TVG actively establishes and targets other environmental objectives such as our current ongoing initiative to making out headquarters facility paperless.

We are dedicated to implementing sustainable practices to minimise waste and enhance resource efficiency. By transitioning to a paperless office facility, we aim to decrease waste and improve efficiency in our administrative processes. Furthermore, we are committed to reducing the carbon footprint of our business through various initiatives, including improving energy efficiency in our operations and utilising sustainable materials and technologies.

Engagement with stakeholders, employees, suppliers, and customers is key to enhancing our environmental performance. Through education and collaboration, we promote environmental awareness and encourage active participation in our environmental programs.

Our approach to environmental management also considers the lifecycle of our products. We strive to enhance the environmental performance of our products from design through disposal, aiming to reduce their overall impact on the environment.

Finally, TVG promotes environmental consciousness at the product design level, targeting carbon mitigating solutions for fleet vehicles such as with our VSOL solar solutions and ensuring that our product range is compatible with the latest Electric and hybrid fleet vehicles.

Through these efforts, TVG is proactive in monitoring and managing the environmental impact of our operations. Our dedication to environmental stewardship is embedded in our business ethos and aligns with our strategic goals, reflecting our commitment to the expectations of our customers and the wider community.
